Proper Procedure for High Speed Floor Burnishing

Initial Floor Preparation: Follow Needels Supply Proper Method for Stripping, Sealing & Finishing Composition Resilient Tile Floors.

Directions for High Speed Burnishing

1. Put out **Yellow Caution Wet Floor Signs** in floor area to be Burnished.
2. Dust mop entire floor area to be burnished to remove all loose dirt and debris. Use a **short handle razor blade scraper** to remove any gum, etc. that is stuck on the floor.
3. Either wet mop or damp mop the entire floor using **Bulldog floor Detergent or Neutral Cleaner** at one ounce per gallon of **warm** water.
4. Allow floor to dry completely.
5. Start spray buffing with **Prime Shine R.S.B.** to remove black marks and scuff marks. See Needels procedure sheet for Maintenance Procedure for Composition Resilient Tile Floors/Periodic Maintenance Buff-N-Clean Spray System.
6. Dilute one part of **Prime Shine R.S.B. High Gloss Restorer** to three parts of cool water. Apply a thin even coat to the floor using a **lambswool applicator** or a **rayon mop head**. **Note: you don't need to put the Prime Shine R.S.B. where the burnisher can't get to** (i.e. corners, under furniture and "tight areas"). Allow to dry completely approximately 20 to 30 minutes.
7. Using a **high speed burnisher (1500-2300 rpm)** and a clean dry **20 inch burnishing pad**, go over the entire floor surface, where you applied the **Prime Shine RSB**.
8. After burnishing is completed, dust mop the entire floor again to remove any dust that the floor pad may have left behind.
9. Remove **Yellow Caution Wet Floor Signs** from floor area.
10. When finished burnishing, clean floor pads in a solution of **Needels Floor Pad Cleaner** and **hot** water. Rinse completely with clean water and then hang pads up to dry thoroughly before using again.

Overall comments: High Speed Burnishing should be done a minimum of once per week to a floor that has been properly sealed and finished. If a higher shine is desired you can increase the number of times per week that you burnish. Also see **Needels procedure sheets on "Maintenance Procedure for Composition Resilient Tile Floors"** and **"Proper Method for Stripping, Sealing and Finishing Composition Resilient Tile Floors"**

Turn Sheet Over for "Did You Remember" Items
